

FLOW CONTROL INSTRUMENTS AND EQUIPMENTS

PRECISION FLOW & CONTROL SOLUTIONS

Engineered for Reliability. Built for Industry.

ABOUT S3 VALVES

MASTERING THE FLOW WITH PRECISION

S3 Valves is a professionally driven engineering and manufacturing company based in Ambarnath, dedicated to delivering reliable, precision-engineered valve and flow control solutions for modern industrial applications.

Built on quality, innovation, and technical expertise, the company develops products that combine performance, durability, and cost efficiency.

MANUFACTURING SETUP

- Precision Machining
- Industrial Assembly
- Production Facility
- Integrated Engineering

OUR VISION

To become a trusted and recognized name in industrial valve manufacturing by delivering innovative, durable, and high-performance flow control solutions.

OUR MISSION

To provide industries with reliable and precision-engineered valve solutions through continuous improvement, quality-focused manufacturing, and engineering excellence.

BUILT FOR DEMANDING INDUSTRIAL APPLICATIONS

Engineering-Driven Approach

Every product is developed with a strong engineering foundation focused on performance, reliability, and long-term operational efficiency.

Advanced Design & Simulation

We use SOLIDWORKS for design, analysis, and simulation to validate performance before manufacturing and improve reliability.

Precision Manufacturing

Automated CNC and VMC machining systems support dimensional accuracy, repeatability, and high-quality surface finish.

Experienced Technical Team

Our team brings over 20 years of experience in refrigeration systems, flow equipment, materials engineering, and chemical handling applications.

Quality & Reliability

Quality is controlled from material selection and machining to assembly and testing, with focus on durability and sealing performance.

Customization Capability

We provide customized solutions for specific pressure, temperature, media, and performance conditions across industrial applications.

ENGINEERING SUPPORT FROM DESIGN TO SIMULATION TO MANUFACTURING

**CHOOSE THE ENGINEERING SUPPORT YOU NEED, FROM DESIGN TO SIMULATION TO
MANUFACTURING.**

Work with us for design and analysis, simulation, manufacturing support, or the complete end-to-end path. We adapt the consultancy scope to the stage your project is in.

DESIGN & ANALYSIS

SIMULATION

MANUFACTURING

01

Choose Scope

Start with design and analysis, simulation, manufacturing guidance, or the complete path.

02

Design

We create models, drawings, routings, assemblies, and production-ready engineering data.

03

Simulate

We check performance through structural, thermal, fatigue, motion, and optimization studies.

04

Manufacture

We support production of engineered parts, assemblies, routings, structures, and valve systems.

SECTION 01

DESIGN & ANALYSIS

We turn your requirement into engineered models, routed pipes and tubes, wiring layouts, 2D drawings, tolerance studies, costing support, and clear visualizations.

CAPABILITIES

- Part and assembly modeling
- Design for manufacturing
- Structural analysis
- Pipe, tube, and harness routing
- Time-based motion analysis

SECTION 02

SIMULATION

We reduce uncertainty before production by validating structure, heat, fatigue, buckling, pressure vessel behavior, motion, contact, and service conditions.

CAPABILITIES

- Finite element analysis
- Linear static simulation
- Mechanism motion simulation
- Pressure vessel simulation
- Thermal and buckling studies

SECTION 03

MANUFACTURING

The same team that understands the design intent can help turn it into finished parts, assemblies, routed systems, fabricated structures, and valve solutions.

CAPABILITIES

- Manufacturing of designed parts
- DFM-ready component support
- Fabricated assemblies
- Pipeline and tube routing fabrication
- Valve assemblies and systems

BRING US THE REQUIREMENT.

Share the part, assembly, routing, valve system, or industrial problem. We can support a single stage or coordinate design, simulation, and manufacturing together.

EXACT STAGE SUPPORT

APPLICATIONS

ENGINEERED FOR DIVERSE INDUSTRIAL APPLICATIONS

01

Oil & Gas

Reliable valves for demanding pressure and flow applications in upstream, midstream, and downstream operations.

02

Chemical Industry

Corrosion-resistant solutions engineered for aggressive process media and chemical handling systems.

03

Pharmaceutical

Precision flow control for hygienic processing systems with contamination-free, sanitary designs.

04

Water Treatment

Efficient and durable fluid control solutions for municipal and industrial water management systems.

05

Power Plants

Performance-driven valves rated for high-temperature and high-pressure steam and utility systems.

06

Food & Beverage

Safe, sanitary, and hygienic flow management solutions meeting food-grade processing standards.

COMPREHENSIVE INDUSTRIAL VALVE SOLUTIONS

S3 Valves offers a complete portfolio of industrial valves engineered to serve every process requirement — from standard shut-off to specialized hygienic and pressure-relief applications.

Ball Valve

Quarter-turn flow control

Butterfly Valve

Compact flow regulation

Gate Valve

Full-bore flow isolation

Diaphragm Valve

Hygienic & leak-free

Safety Valve

Pressure relief & protection

Strainer

Equipment protection

Sight Glass

Visual flow monitoring

NRV Valve

Non-return flow control

Pinch Valve

Slurry & abrasive media

Angle Valve

Directional flow control

Globe Valve

Precise throttling service

Knife Gate Valve

Slurry isolation duty

INDUSTRIAL GRADE

DN15 – DN300

PN16 – PN100

SS304 / SS316

-40°C to +200°C

PRODUCT - 01

BALL VALVE

High-performance quarter-turn flow control delivering smooth operation, excellent sealing performance, and reliable shut-off for demanding industrial applications.

- ✓ Tight shut-off with zero leakage performance
- ✓ Low pressure drop across full bore
- ✓ Easy quarter-turn manual or actuated operation
- ✓ Corrosion-resistant body in SS304 / SS316
- ✓ Long operational life with low maintenance

APPLICATIONS

Water Systems

Chemical Processing

Oil Pipelines

Industrial Plants

COMPACT DESIGN

DN50 – DN600

PN10 – PN25

CI / DI / SS

PRODUCT - 02

BUTTERFLY VALVE

Compact and efficient flow regulation designed for fast operation, lightweight construction, and reliable sealing across large diameter pipeline applications.

- ✓ Compact lightweight design for easy installation
- ✓ Fast quarter-turn opening and closing
- ✓ Excellent resilient sealing performance
- ✓ Low torque actuation — manual or pneumatic
- ✓ Easy inline maintenance and low cost of ownership

APPLICATIONS

HVAC Systems

Water Treatment

Chemical Industries

Process Plants

DN15 – DN400

PN16 – PN150

WCB / SS / CI

PRODUCT - 03

GATE VALVE

Engineered for full-flow isolation with rugged industrial construction and minimal pressure loss — the reliable workhorse for critical on/off service in demanding systems.

- ✓ Full bore flow with minimal pressure drop
- ✓ Heavy-duty body construction for high-pressure service
- ✓ Reliable metal-to-metal gate sealing
- ✓ Long-term reliability in demanding environments
- ✓ Available in rising and non-rising stem configurations

APPLICATIONS

Steam Systems

Water Distribution

Oil & Gas Industries

Industrial Plants

DN15 – DN200

PN6 – PN16

PTFE / EPDM

PRODUCT - 04

DIAPHRAGM VALVE

Engineered for pharmaceutical and chemical industries requiring contamination-free, hygienic operation with absolute leak-proof sealing performance.

- ✓ Absolute leak-proof diaphragm sealing
- ✓ Excellent chemical resistance — PTFE/EPDM options
- ✓ Hygienic design — no dead zones or contamination
- ✓ Smooth bore for clean in-place (CIP) compatibility
- ✓ Easy diaphragm replacement — low maintenance design

APPLICATIONS

Pharmaceutical

Water Purification

Chemical Processing

Food Processing

SAFETY CRITICAL

DN15 – DN100

Up to PN420

Spring Loaded

PRODUCT - 05

SAFETY VALVE

Dependable pressure relief engineered to protect boilers, pressure vessels, and industrial pipelines from over-pressurization — your last line of system defense.

- ✓ Accurate set pressure with spring-loaded mechanism
- ✓ Reliable automatic re-seating after pressure relief
- ✓ High operational safety and repeatability
- ✓ Durable stainless steel or alloy construction
- ✓ Certified to ASME / API / IBR standards

APPLICATIONS

Boilers

Pressure Vessels

Petrochemical Plants

Industrial Pipelines

STRAINERS & SPECIAL VALVES

Complete flow control ecosystem — supporting components engineered to protect equipment, monitor flow, and ensure system integrity.

Strainer (Y-Type / Basket)

Removes solids, debris and particulates from pipeline flow protecting pumps, valves and instruments. Available in Y-type and basket configurations for various flow rates.

Water Systems

Oil Transfer

Chemical Lines

Sight Glass Valve

Visual flow monitoring for transparent observation of fluid color, clarity, and flow conditions without system interruption. Borosilicate glass for chemical resistance.

Process Lines

Chemical Plants

Utilities

Non-Return Valve (NRV)

Automatically prevents reverse flow protecting pumps, compressors and system equipment. Available in swing check, lift check and dual plate configurations.

Pump Systems

Water Lines

Oil Transfer

Pinch Valve

Reliable shut-off and throttling for slurry, abrasive, and corrosive media. Flexible sleeve design ensures zero contact between media and valve body.

Slurry Lines

Mining

Wastewater

CUSTOM VALVE SOLUTIONS

Application-specific engineering for non-standard requirements

CONTACT OUR ENGINEERING TEAM →

MANUFACTURED WITH PRECISION ENGINEERING

Our manufacturing operations combine modern machinery, skilled craftsmanship, and strict process control to deliver premium industrial valve solutions meeting global quality standards.

01

CNC Precision Machining

Advanced computer-controlled machining for dimensional accuracy and consistent surface quality across all valve components.

02

Precision Fabrication

Expert welding, forming, and fabrication processes ensuring structural integrity and pressure-tight assembly of all valve bodies.

03

Assembly & Integration

Controlled assembly environment ensuring correct torque, seal placement, and operational compliance for every valve unit.

04

Surface Finishing

Powder coating, shot blasting, and protective treatments ensuring corrosion resistance and premium aesthetic finish.

05

Pressure Testing

Hydrostatic and pneumatic pressure tests verifying body strength and seal integrity to rated operating conditions.

06

Quality Dispatch

Final inspection, certification, and controlled packaging ensuring products arrive in perfect condition ready for installation.

ISO CERTIFIED MANUFACTURING FACILITY

Every product manufactured to international industrial standards

QUALITY TESTED FOR INDUSTRIAL RELIABILITY

Every S3 valve undergoes rigorous multi-stage testing to ensure dependable performance under the most demanding industrial conditions. No valve leaves our facility without passing every test.

01 Hydrostatic Pressure Testing

Body and seat pressure tested to 1.5x rated working pressure using water as test medium to verify structural integrity and pressure containment.

02 Seat Leak Testing

Zero-leakage verification of valve seating surfaces using air or water per API 598 / BS EN 12266 standards across full pressure range.

03 Dimensional Inspection

Precision measurement of all critical dimensions — face-to-face, bore, flange drillings — verified against engineering drawings and applicable standards.

04 Material Verification

PMI (Positive Material Identification) and mill certificate verification ensuring correct alloy grades and material compliance for every component.

05 Operational Performance Test

Full cycle operational testing verifying smooth open/close torque, actuator response, and mechanical function under representative conditions.

06 Final Quality Inspection

Comprehensive visual and dimensional review by QC team prior to painting, marking, certification documentation and approved dispatch.

TECHNICAL SPECIFICATIONS

Ball Valve Specifications

PARAMETER	BALL VALVE	BUTTERFLY VALVE	GATE VALVE
Size Range (DN)	15 – 300 mm	50 – 600 mm	15 – 400 mm
Pressure Rating	PN16 – PN100	PN10 – PN25	PN16 – PN150
Body Material	SS304, SS316, WCB	CI, DI, SS316	WCB, SS304, CI
Temperature Range	-40°C to +200°C	-10°C to +150°C	-20°C to +425°C
End Connection	Flanged / Threaded / BW	Wafer / Lug / Flanged	Flanged / Butt Weld
Operation Type	Manual / Actuated	Manual / Geared / Actuated	Manual / Geared
Seat Material	PTFE / Nylon	EPDM / PTFE / NBR	Metal / Soft Seat
Standard	API 608 / BS 5351	API 609 / EN 593	API 600 / BS 1414

Diaphragm, Safety & Strainer Specifications

PARAMETER	DIAPHRAGM VALVE	SAFETY VALVE	STRAINER
Size Range (DN)	15 – 200 mm	15 – 100 mm	15 – 300 mm
Pressure Rating	PN6 – PN16	Up to PN420	PN16 – PN40
Body Material	SS316 / CI / PP	SS316 / Alloy Steel	CI / SS304 / WCB
Temperature Range	-10°C to +130°C	-29°C to +400°C	-20°C to +300°C
Diaphragm/Element	PTFE / EPDM / Natural Rubber	Spring Loaded	SS Mesh / Perforated
End Connection	Flanged / Union / Clamp	Flanged / Screwed	Flanged / Screwed
Standard	BS 5156 / DIN 3352	ASME VIII / API 520	MSS SP-83

CUSTOM SPECIFICATIONS AVAILABLE

Special materials, non-standard sizes, atypical pressure ratings, and unique end connections can be manufactured to client specifications. Contact our engineering team for detailed technical consultation and custom quotation.

OUR COMMITMENT

BUILT FOR PERFORMANCE. **TRUSTED** BY INDUSTRY.

At S3 Valves, we believe industrial performance begins with engineering precision. Our products are designed to deliver operational reliability, safety, and long-term value for the industries that power our world.

We are committed to manufacturing flow control solutions that industries can trust under the most demanding conditions — because when it comes to critical systems, there is no room for compromise.
